Alouatta f. pallens

[illegible]

Examination of the beam on the lower
side found a quantity of the cargo in bags damaged
by water, and some other. In the Starboard side on
edge of the upper beam. There are five side ports, the
upper to lower, the lower beam, and from upper
a quantity of water has passed over the cargo then,
the both sides and edge of the iron rods things in
beam, and examination of the fore end of the upper
on the port side. The side ports appear to have
leaking, and water passing in through side beam and
edges of the side strings and beams, the plug in the
edge of the side beam being with the plug, and
the side. The muzzling of the side, and

by water having been found through the
ceiling off the ceiling into the space below being
No Damage

The cargo in the fore hold on the Atlantic
Line is much damaged. Damage is from the same
cause. That is the high water level found along
the beams of the ceiling was found to be
No Damage
