

G. L. "Ballin"

The Owners representative having called to-day in reference to the fitting of this vessel for burning oil fuel, and having requested that the testing of the double bottom under the oil tanks carried out under survey at Newcastle in March last might be considered as part of the survey required at this time - it is submitted the Newcastle Surveyors be informed that the water ballast tanks tested and found satisfactory by them in March last need not be re-tested now in connection with the fitting of the vessel for burning oil fuel, provided they are satisfied the tanks are now in good and efficient condition.

Tr. to Newcastle  
4/9/96.
