

(Cinnarder)

Swan Hunter Wigham Richardson's Ls p. 735.

It is submitted the Swansea Surveyors should be informed in reply to the inquiry contained in their letter of 26 Nov 1904 that the steel in these Mannesmann tubular pillars should <sup>fulfil the conditions named</sup> ~~be~~ ~~tested in accordance with the requirements contained~~ in the footnote to Table S. 13.

The Surveyors should first obtain from the manufacturer a certificate guaranteeing that all the material used in the manufacture of the pillars had been tested by them and that it was found to fulfil the Society's requirements as contained in the footnote to Table S. 13. Having received this certificate the Surveyors should select the test pieces for their own tests in the proportion of at least one test for every fifty pillars submitted for approval. ~~There~~  
~~was no need for the test pieces to be tested by the manufacturer~~  
~~before they were submitted for approval~~
