

C O P Y .

Lloyd's Register of Shipping

London 28th October 1932.

Dear Sirs,

With reference to Mr. Stupari's letter of the 22nd instant addressed to Dr. S.F. Dorey, respecting the boilers of the s.s. "CONTE DI SAVOIA", I have to acquaint you that as the scantlings of the water tube boilers in question are suitable for a working pressure of 32.5 kgs. per sq.cm., the proposal to adjust the safety valves to 30 kgs. per sq.cm., is in order.

I may add that the working pressure to be recorded in the Register Book will be 30 kgs. per sq.cm.

I am, Dear Sirs,

Yours faithfully,

(Sgd) E. Carey

pro Secretary.

The Surveyors,

TRIESTE.
