No. in R.B. Name "ARADANA" Gross tons

Owners New Zealand Government. Managers - Port of Registry

Hull built at Dumbarton. By Wm. Denny & Bros. Yard No. Year Month

Main Engines made at Preston. By English Electric Co. Ltd. Eng. No. I.H. 5570 When 1961-7

Gearing made at By

Donkey boilers made at By Blr. Nos. When

Machinery installed at By When

Particulars of restricted service of ship, if limited for classification

Particulars of vegetable or similar cargo oil notation, if required

Is ship to be classed for navigation in ice? Is ship intended to carry petroleum in bulk?

Is refrigerating machinery fitted? If so, is it for cargo purposes? Type of refrigerant

Is the refrigerating machinery compartment isolated from the propelling machinery space? Is the refrigerated cargo installation intended to be classed?

The following particulars should be given as fully and as clearly as possible. Where the answer is "No" or "None", say so! Ticks and other signs of doubtful meaning are not to be used. Where the wording is not applicable to the installation, a black line may be inserted. If the main engines have been constructed at another port and are covered by a separate report, the particulars given in that report need not be repeated below, but the port and report number should be stated.

No. of main engines 6 No. of propellers None Brief description of propulsion system Diesel Electric.

MAIN RECIPROCATING ENGINES. Licence Name and Type No. English Electric Diesel. Type 16 CSVM.

No. of cylinders per engine 16 Dia. of cylinders 10" stroke(s) 12" 2 or 4 stroke cycle 4 Single or double acting Single.

Maximum approved BHP per engine 1745 at 750 RPM of engine and 250 RPM of propeller.

Corresponding MIP 145 (For DA engines give MIP top & bottom) Maximum cylinder pressure 950 Machinery numeral 349

Are the cylinders arranged in Vee or other special formation? V Formation. If so, number of crankshafts per engine One.

TWO STROKE ENGINES. Is the engine of opposed piston type? If so, how are upper pistons connected to crankshaft?

Is the exhaust discharged through ports in the cylinders or through valve(s) in the cylinder covers? No. and type of mechanically driven scavenge pumps or blowers per engine and how driven.

No. of exhaust gas driven scavenge blowers per engine Where exhaust gas driven blowers only are fitted, can the engine operate with one blower out of action?

If a stand-by or emergency pump or blower is fitted, state how driven No. of scavenge air coolers Scavenge air pressure at full power

Are scavenge manifold explosion relief valves fitted?

FOUR STROKE ENGINES. Is the engine supercharged? Yes. Are the undersides of the pistons arranged as supercharge pumps? No. No. of exhaust gas driven blowers per engine

4 No. of supercharge air coolers per engine 4 Supercharge air pressure 10" Hg. Can engine operate without supercharger? Yes.

TWO & FOUR STROKE ENGINES-GENERAL. No. of valves per cylinder: Fuel One Inlet Two Exhaust Two Starting One Safety One

Material of cylinder covers Cast-iron. Material of piston crowns Aluminium Alloy. Is the engine equipped to operate on heavy fuel oil? No.

Cooling medium for: Cylinders Fresh Water Pistons None. Fuel valves Oil Fuel. Overall diameter of piston rod for double acting engines

Is the rod fitted with a sleeve? No. Is welded construction employed for: Bedplate? No. Frames? No. Entablature? No. Is the crankcase separated from the

underside of pistons? No. Is the engine of crosshead or trunk piston type? Trunk. Total internal volume of crankcase 98 cu.ft. No. and total area of explosion relief

devices 4 - 112 sq.in. Are flame guards or traps fitted to relief devices? Yes. Is the crankcase readily accessible? Yes. If not, must the engine be removed for

overhaul of bearings, etc? No. Is the engine secured directly to the tank top or to a built-up seating? Built up seating. How is the engine started? Compressed air.

Can the engine be directly reversed? No. If not, how is reversing obtained? Electric Motor Propulsion.

Has the engine been tested working in the shop? Yes How long at full power? 6 hours.

CRANK & FLYWHEEL SHAFTING. Date of approval of torsional vibration characteristics of the propelling machinery system 5-5-61. State barred speed range(s), if imposed

for working propeller None. For spare propeller None. Is a governor fitted? Yes. Is a torsional vibration damper or detuner fitted to the shafting? No.

Where positioned? Type No. of main bearings 9 Are main bearings of ball or roller

type? Distance between inner edges of bearings in way of crank(s) 13" Distance between centre lines of side cranks or eccentrics of opposed piston engines

Crankshaft type: Built, semi-built, solid. (State which) Solid.

Diameter of journals 8 1/2" Diameter of crankpins Centre 7 1/2" Breadth of webs at mid-throw 11 1/8" Axial thickness of webs 2 1/8"

If shrunk, radial thickness around eyeholes Are dowel pins fitted? Crankshaft material Journals O.H. Steel. Minimum 36 T.p.s.i.

Webs O.H. Steel. Tensile strength

Diameter of flywheel 4' 10 1/2" Weight 2880lb. Are balance weights fitted? No. Total weight No. Radius of gyration

Diameter of flywheel shaft 8.25 Material O.H. Steel. Minimum approved tensile strength 36 T.p.s.i.

Flywheel shaft: separate, integral with crankshaft, integral with thrustshaft. (State which) Integral with Crankshaft.

GENERAL REMARKS

State if the machinery has been constructed and/or installed under special survey in accordance with the Rules, approved plans and Secretary's letters. State quality of materials and workmanship and recommendations for classification, including any special notation to be assigned. Where existing machinery is submitted for classification the circumstances should be explained as fully as possible.

This machinery has been constructed under Special Survey in accordance with the Requirements of Rules, Approved Plans, and Secretary's letters.

The materials used in the construction have been tested under supervision of the Surveyors to the Society, found satisfactory and workmanship good.

The machinery has been examined during full power, overload, fractional loads and governing test bed running and found satisfactory.

The machinery as now seen, is eligible in my opinion to be classed in the Register Book of LMC, with efficiently installed and tested.
