

REPORT ON MACHINERY.

JUL 3 1902

Port of *Bremenhaven*

Received at London Office

Survey held at *Geestmünde* Date, first Survey *10th Jan.* Last Survey *27th June 1902*

on the *donkey boilers of the 5 masted sailing ship "Preussen"* Tons { Gross *5142.*
R. B. Petersen Built at *Geestmünde* By whom built *J. C. Tecklenborg & Co.* Net *4826*
 When built *1902*

made at — By whom made — when made —
 made at *Geestmünde* By whom made *J. C. Tecklenborg & Co.* when made *1902*
 Indicated Horse Power — Owners *F. Laisa* Port belonging to *Hamburg*
 Indicated Horse Power as per Section 28 — Is Refrigerating Machinery fitted *no* Is Electric Light fitted *no*

ENGINES, &c.—Description of Engines

Cylinders	Length of Stroke	Revs. per minute	Dia. of Screw shaft	No. of Cranks
<i>as per rule</i>	<i>as per rule</i>	<i>as per rule</i>	<i>as per rule</i>	<i>as per rule</i>
<i>as fitted</i>	<i>as fitted</i>	<i>as fitted</i>	<i>as fitted</i>	<i>as fitted</i>
<i>Dia. of crank shaft journals</i>	<i>Dia. of crank pin</i>	<i>Size of crank webs</i>	<i>Lgth. of stern bush</i>	<i>Dia. of thrust shaft under</i>
<i>Dia. of screw</i>	<i>Pitch of screw</i>	<i>No. of blades</i>	<i>State whether movable</i>	<i>Total surface</i>
<i>Feed pump</i>	<i>Diameter of ditto</i>	<i>Stroke</i>	<i>Can one be overhauled while the other is at work</i>	
<i>Bilge pumps</i>	<i>Diameter of ditto</i>	<i>Stroke</i>	<i>Can one be overhauled while the other is at work</i>	
<i>Donkey Engines</i>	<i>Sizes of Pumps</i>	<i>No. and size of Suctions connected to both Bilge and Donkey pumps</i>		
<i>Engine Room</i>	<i>In Holds, &c.</i>			
<i>Bilge injections</i>	<i>sizes</i>	<i>Connected to condenser, or to circulating pump</i>	<i>Is a separate donkey suction fitted in Engine room & size</i>	
<i>Are the bilge suction pipes fitted with roses</i>	<i>Are the roses in Engine room always accessible</i>		<i>Are the sluices on Engine room bulkheads always accessible</i>	
<i>Are connections with the sea direct on the skin of the ship</i>	<i>Are they Valves or Cocks</i>			
<i>Are they fixed sufficiently high on the ship's side to be seen without lifting the stokehold plates</i>	<i>Are the discharge pipes above or below the deep water line</i>			
<i>Are they each fitted with a discharge valve always accessible on the plating of the vessel</i>	<i>Are the blow off cocks fitted with a spigot and brass covering plate</i>			
<i>Are the pipes carried through the bunkers</i>	<i>How are they protected</i>			
<i>Are the pipes, cocks, valves, and pumps in connection with the machinery and all boiler mountings accessible at all times</i>	<i>Are the bilge suction pipes, cocks, and valves arranged so as to prevent any communication between the sea and the bilges</i>			
<i>Are the stern tube, propeller, screw shaft, and all connections examined in dry dock</i>	<i>Is the screw shaft tunnel watertight</i>			
<i>Is the door fitted with a watertight door</i>	<i>Is it worked from</i>			

BOILERS, &c.— (Letter for record) **Total Heating Surface of Boilers** Is forced draft fitted

Description of Boilers	Working Pressure	Tested by hydraulic pressure to
<i>Can each boiler be worked separately</i>	<i>Area of fire grate in each boiler</i>	<i>No. and Description of safety valves to</i>
<i>Area of each valve</i>	<i>Pressure to which they are adjusted</i>	<i>Are they fitted with easing gear</i>
<i>Mean distance between boilers or uptakes and bunkers or woodwork</i>	<i>Mean dia. of boilers</i>	<i>Length</i>
<i>Range of tensile strength</i>	<i>Are they welded or flanged</i>	<i>Material of shell plates</i>
<i>Range of rivet holes in long. seams</i>	<i>Pitch of rivets</i>	<i>long. seams</i>
<i>Advantages of strength of longitudinal joint</i>	<i>Working pressure of shell by rules</i>	<i>Size of manhole in shell</i>
<i>No. and Description of Furnaces in each boiler</i>	<i>Material</i>	<i>Outside diameter</i>
<i>Thickness of plates</i>	<i>Description of longitudinal joint</i>	<i>No. of strengthening rings</i>
<i>Combustion chamber plates: Material</i>	<i>Thickness: Sides</i>	<i>Back</i>
<i>Back</i>	<i>Top</i>	<i>Bottom</i>
<i>If stays are fitted with nuts or riveted heads</i>	<i>Working pressure by rules</i>	
<i>Diameter at smallest part</i>	<i>Area supported by each stay</i>	<i>Working pressure by rules</i>
<i>End plates in steam space:</i>	<i>Working pressure by rules</i>	<i>Material of stays</i>
<i>Material of Front plates at bottom</i>	<i>Material of Front plates at bottom</i>	<i>Material of stays</i>
<i>Material of Lower back plate</i>	<i>Thickness</i>	<i>Greatest pitch of stays</i>
<i>Working pressure of plate by rules</i>	<i>Working pressure of plate by rules</i>	<i>Working pressure of plate by rules</i>
<i>Pitch of tubes</i>	<i>Material of tube plates</i>	<i>Thickness: Front</i>
<i>Back</i>	<i>Mean pitch of stays</i>	<i>Mean pitch of stays</i>
<i>Working pressures by rules</i>	<i>Girders to Chamber tops: Material</i>	<i>Depth and</i>
<i>Length as per rule</i>	<i>Distance apart</i>	<i>Number and pitch of Stays in each</i>
<i>Superheater or Steam chest; how connected to boiler</i>	<i>Can the superheater be shut off and the boiler worked</i>	
<i>Diameter</i>	<i>Length</i>	<i>Thickness of shell plates</i>
<i>Material</i>	<i>Description of longitudinal joint</i>	<i>Diam. of rivet</i>
<i>Pitch of rivets</i>	<i>Working pressure of shell by rules</i>	<i>Diameter of flue</i>
<i>Material of flue plates</i>	<i>Thickness</i>	<i>Thickness</i>
<i>Distance between rings</i>	<i>Working pressure by rules</i>	<i>End plates: Thickness</i>
<i>How stayed</i>	<i>How stayed</i>	<i>How stayed</i>
<i>Working pressure of end plates</i>	<i>Area of safety valves to superheater</i>	<i>Are they fitted with easing gear</i>

DONKEY BOILER— No. 1816-1819 Description *Upright Galloway tube steel boilers*
 Made at *Geestmünde* By whom made *J. C. Tecklenborg & Co.* When made *1902* Where fixed *In steel house on upper deck*
 Working pressure *114 lb* tested by hydraulic pressure to *228 lb* No. of Certificate *1816-19* Fire grate area *8 7/8* Description of safety valves *Spring valves*
 No. of safety valves *2* Area of each *6* Pressure to which they are adjusted *114 lb* If fitted with easing gear *Yes* If steam from main boilers can enter the donkey boiler *No* Dia. of donkey boiler *6'* Length *11' 4"* Material of shell plates *S.M. steel* Thickness *9/16* Range of tensile strength *26 lb* Descrip. of riveting long. seams *heble overlapped* Dia. of rivet holes *7/8"* Whether punched or drilled *drilled* Pitch of rivets *2 15/16*
 Lay of plating *5 15/16* Per centage of strength of joint *Rivets 62* Plates *72* Thickness of shell crown plates *5/8"* Radius of do. *74 1/2"* No. of Stays to do. *4*
 Size *5/16" x 1 1/2"* Diameter of furnace Top *59 1/16* Bottom *67 1/32* Length of furnace *69 5/16* Thickness of furnace plates *4 3/64* Description of joint *Welded* Thickness of furnace crown plates *4 9/64* Stayed by *Uptake* Working pressure of shell by rules *106.5*
 Working pressure of furnace by rules *115 lb* Diameter of uptake *16 1/32* Thickness of uptake plates *19/32* Thickness of water tubes *7/16*

SPARE GEAR. State the articles supplied:—

The foregoing is a correct description,

JOH. C. TECKLENBORG A.G.

Manufacturer.

*Schiffswort und Maschinenfabrik.
Hamburg-Clamm.*

Dates of Survey while building
 During progress of work in shops— *10/1. 21/1. 1/2. 8/2. 21/2. 4/3. 14/3. 19/3. 25/3. 1/4. 17/4. 3/5. 7/5. 1902.*
 During erection on board vessel— *14/5. 24/5. 26/6. 9/6. 13/6. 25/6. 27/6. 1902.*
 Total No. of visits *20.*

Is the approved plan of main boiler forwarded herewith —

“ “ “ donkey “ “ “ *Yes*

General Remarks (State quality of workmanship, opinions as to class, &c.)

Please see letters from Secretary dated 14/1. 4/2. 14/2. 28/2. 15/3. 24/3. init. E and 3/4 1902 init. M.

Material of screw shaft — Is the screw shaft fitted with a continuous liner the whole length of the stern tube —

Is the after end of the liner made water tight in the propeller boss — If the liner is in more than one length are the joints burned —

If the liner does not fit tightly at the part between the bearings in the stern tube, is the space charged with a plastic material insoluble in water and non-corrosive — If two liners are fitted, is the shaft lapped or protected between the liners —

These boilers have been built of Siemens-Martin steel, manufactured by Thyssen & Co. at Mülheim a. d. Ruhr and approved of by letter from Secretary dated 28.2.02. init. E.

The workman ship is good and all dimensions in accordance with the approved drawing. They have been tested by hydraulic up to 228 lb per sq. in. and found quite tight. Under steam they are also quite tight and the safety valves lift freely at 114 lb per sq. in. The boilers are fed by a duplex steam pump 2" diam. and 3 1/4" stroke. They are to drive four steam cargo winches and a duplex ballast pump of 4 3/4" diam. and 6 inch stroke.

The boilers have been marked No. 1816-19
 Lloyd's Test
 228 lb.
 5.4.02. F. Th.

These boilers being built of good material in accordance with the approved drawing and the workmanship being also very good, they are eligible in my opinion to be classed and have the notation D.B. C. on marked against them in the Register Book.

It is submitted that this vessel is eligible for THE RECORD — **DB:02**

(2 DB working pressure 114 lb)

The amount of Entry Fee. . . £ 1 : : When applied for,
 Special £ : : 2. 7. 1902
 Donkey Boiler Fee £ 4 : 4 : : When received, F. Th.
 Travelling Expenses (if any) £ : 15 : : 2. 7. 1902

F. Thomsen
 Engineer Surveyor to Lloyd's Register of British & Foreign Shipping.

Committee's Minute **FRI. 4 JUL 1902 TUES. 8 JUL 1902**

Assigned **+ DB 02**

Certificate (if required) to be sent to the Surveyors and forwarded to the Registrar of Shipping (The Registrar is requested not to write on or before the space for Committee's Minute.)
