Loeffler Boiler Installation.  
-----

IT IS SUBMITTED the Trieste Surveyors be informed the plans relating to this Loeffler Boiler installation are being examined, but that it is noted on certain plans reference is made to the "Dauerstands Festigkeit", which it is believed is the Limiting Creep Stress.

The Limiting Creep Stress is defined in different ways by different Authorities, and as the figures given on the plan for molybdenum steel do not correspond with anything that is available in this Office, it is desired that the Firm will supply the precise composition of the steel proposed for these purposes, and at the same time define the creep limit as used by them.
