

Silva Gouveia

Lis. 2970

It is submitted that before this case receives consideration the Surveyor should be informed that before the survey for classification can be regarded as being complete the requirements contained in the last paragraph of an endorsement dated 20-8-8 should be complied with.

A megger test should be carried out on the electrical installation, and he should state if the installation is in accordance with the requirements of the Rules.

Also the new circulating pump casing should be fitted, unless in the opinion of the Surveyor this may be safely deferred.

The Surveyor should note that the total heating surface is 191 m^2 and the H.P. 20.
