

s/s "Monkstone"

May 18844.

This vessel was built at Bideford, the machinery boilers were made at Lytham & fitted on board at Bideford.

The Bristol Surveyors stated on the 13<sup>th</sup> of June that to complete the machinery survey the bridge pipe arrangement & the spare gear required to be examined, the safety valves adjusted & the main engines tried under working conditions, the vessel having left Bideford before this was done.

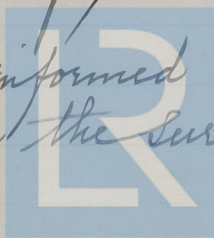

The Barry Surveyors now report that the above requirements have been carried out, except that the bridge arrangement in the holds could not be examined as the vessel was loaded & proceeding to sea.

It is submitted action be deferred until the survey has been completed.
