

S.S. "RAPALLO" building by the Societa Esercizio Bacini
at Riva Trigoso with a view to class 100A1 "Carrying
Petroleum in Bulk".

When this vessel came under the survey of the Society's
Surveyors for classification the framing was already erected,
and the Genoa Surveyors now forward a request from the
Builders in which it is stated that considering that the
construction of the vessel has been practically all carried
out under the survey of the Society's Surveyors, they trust
the vessel will receive the Special Survey mark *.

From the returns it appears that the machinery for
the vessel was already constructed when the survey was
undertaken, and therefore in no circumstances could the
Special Survey mark be assigned to the machinery.

In these circumstances it is not considered that the
Special Survey mark could be recommended for the hull.
