

see ^{bites} on Condessa

2 - MAY 1944

It is noted that the actual number of insulated chambers in the Rippington Grange is 32, but it is not clear whether the total capacity of these is 473,170 cubic feet as in the case of the "Condessa" which has only 22 chambers.

It is submitted that ^{now} the Surveyor be requested to amend or confirm this figure for the "Rippington Grange".
