

*Riuniti III*

The main engines and the auxiliary engines have been constructed under the survey of the Society's Genoa Surveyors at Turin.

IT IS SUBMITTED that the survey of the remainder of the machinery should be arranged for through the Genoa Office and it is considered advisable that Mr. Ormiston, who is at present in this country, might be consulted in the matter, due to the fact that the Naples Surveyor, Mr. Todaro is at present indisposed and his place is at present filled by Mr. Geniram from Trieste.
