

Acarius

Bel. 1145-6.

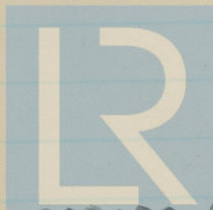

Nov. 9/1980.

It is submitted that before their case receives consideration the Belfast-
Lurgan should be requested to furnish
the necessary particulars of the bilge
pumps. For their information the

Nov. report states the bilge pumps
worked from the main engines as being
one bilge and one sanitary (rotary); and
the pumps connected to the main bilge
line as being two 35-ton rotary, driven
by the main engines.

This might be confirmed, and
particulars given of the independent
bilge pumps.
