* If the frames, skin planking, or ceiling are of unusual thickness the breadth of vessel to inside of ceiling should be reported if possible.
 In vessels obtaining an allowance for deck erections under Para. 11 where the sheer drops abaft amidships, the R.O.D. is to be taken from the level of the top of the amidship beam.
 The surveyor should state whether the fall in sheer as reported is taken relatively to the line of keel or to the water line. If measured relatively to the line of keel, the surveyor should also state the usual load draft forward and aft sheer survey, and also the usual load draft forward and aft sheer at this point distant
