

"POINT PELEE PARK"

Mtl.Rpt.No.5718

This vessel is one of the Standard Cargo vessels built in Canada to the order of the British Government. The vessel is stated to have been built and completed under the survey of the British Corporation; but has now been converted to a tanker under the supervision of the Society's Surveyors.

The pumping arrangements outside the machinery space have been modified in accordance with the approved plan, and the electrical equipment has also been altered.

According to previous correspondence and to the present report it would appear that Classification with this Society is desired; and a record of L.M.C. has been recommended, although no First Entry Report on the machinery has been received. The machinery has been generally examined.

It is submitted that this vessel is eligible for the record L.M.C. 8.42 ✓

It is concluded that oil fuel is not fitted, but this should be confirmed. X

The Surveyors should be informed that as First Entry Reports are referred to in Report Form 9, it is concluded that these will follow in a separate mail. X

If the Surveyors are correct in stating that the Survey was completed by the British Corporation then a First Entry Report would be required. If, however, the British Corporation Surveyors had not quite finished their Survey and it could be represented that the installing of the machinery had been completed under the Society's supervision, it might be possible to obtain a copy of their certificate in which case a record of L.M.C.* 8.42 could be assigned.
