

"POINT PELEE PARK"

Montreal Report Number 5718.

Carrying Petroleum in Bulk - Class Contemplated.

The New York Surveyors have now telegraphed to state that the cables in the Tween Deck are H.R. type double braided in heavy steel gas tight pipes and the D.G. cables are cab tyre type in steam pipe quality gas tight piping and that special ventilation is arranged in Tween Decks. They further state that the full circumstances are explained in a letter following.

It is, and always has been, a requirement that all cables in Tankers should be lead covered and this requirement has nothing to do with the ventilation of the space in which they are fitted. The vessel is stated to have been built and completed under survey of British Corporation but has been converted to a Tanker under the supervision of the Society's Surveyors.

IT IS SUBMITTED Classification should remain in abeyance pending receipt of the letter mentioned in the cablegram.
