

ARD REPORT on the

M. S. "Calandria" (Hatchov No 29)

This submitted the Copenhagen surveyors be informed that the information required on the back of the freeboard report form is that of the bulkheads between the upper and second decks when a bonnage opening is fitted, and not the particulars of erection on the upper deck. They should therefore forward an amended report giving the required information. The particulars of all hatchways on the upper and second decks should be reported.

They should show clearly if the bonnage is measured to the top of the ceiling which is laid on grounds, and if so should give the depth from top of grounds to top of second deck beams at centre.

The surveyors should be reminded of Circular 1483 issued last month, and in accordance therewith should forward the required prints of midship section and general arrangement plans showing the vessel as built.
