TORSIONAL VIBRATION AUXILIARY MACHINERY

"JOAO ALVARES FAGUNDES"

Torsional vibration characteristics have not been submitted for the auxiliary machinery.

This machinery consists of 2 auxiliary engines, each driving a ~~X~~ 25 K.W. dynamo, and each engine is quite adequate to supply the whole of the current required for all essential services at sea.

It is a matter for consideration, therefore, whether the requirements in respect of torsional vibration calculations might be waived in the case of these engines and the Owners advised accordingly.
