

RD REPORT on the

Chantier de Penhoel

004755-004760-0254

no "U.S."

This submitted the surveyors attention he called to the Secretary's letter of 9th inst; and he he again reminded that as this vessel is to be fitted with a tonnage opening the Second deck is the freeboard deck, and full particulars of the erections on this deck are required. He should indicate the position of the bulkheads forward and aft of the tonnage opening, and the arrangement of scuppers and freeing ports proposed, also the position and dimensions of the tonnage opening in the upper deck.

It is observed that the moulded depth is given as 8.16m, but the depth given on approved plans is 9.32m. With regard to the note in the surveyors letter regarding figures in metric measurement, he should be reminded that the freeboard report is required to be made by him and not by the builders, and all figures for a British freeboard assignment must be given in English measure.
