No. 113815

3 DEC 1946

## REPORT ON ELECTRIC PROPELLING MACHINERY.

Received at London Office 13 MAY 1946

Date of writing Report 6 May 1946 When handed in at Local Office 13 MAY 1946 Port of London

No. in Survey held at Rugby Date, First Survey 18 October 1944 Last Survey 27 February 1946

Reg. Book. Number of Visits 16.

|           |              |                   |              |

| Triple    | Screw vessel | T.E.S. "HELICINA" | Gross ✓ 1216 |
| Quadruple |              |                   | Net ✓ 7282   |

Built at Wallsend By whom built Swan Hunter &amp; Co Ltd Yard No. 1711 When built 1945

Electrical Machines made at Rugby By whom made B.T.H. Co Ltd Contract No. E.10171

Last Horse Power at Full Power 13000 S.H.P. See endorsement Generator No. 5 { R197086 When made 1945.

Nom. Horse Power as per Rule Owners Motor No. 5 { R197087 S T R A T O R R 195309 R O T O R R 183798 Total capacity of Generators 10,000 kilowatts

Trade for which Vessel is intended Port belonging to ✓

EAM ENGINES.—Type of Engine Turbine No. of Engines Two Revs. per minute 3060/4150

Governor fitted Yes Is the speed variation as per Rule when load is thrown off ✓

an emergency Governor fitted Yes Is it arranged for hand tripping Yes

Is it trip the throttle valve as per Rule Yes If exhaust steam is admitted, is an automatic shut-off fitted ✓ and

a non-return or positive shut-off valve fitted To be supplied by Shipbuilders

Torque Limiting.—If generator capacity exceeds motor rating, state means provided for limiting torque input to screw shaft ✓

Lubricating Oil.—State what means are provided for emergency supply Gravity oil tank

the emergency reserve sufficient to maintain lubrication as per Rule ✓

Mechanical Balance.—Are the Engines and Generators balanced so as not to cause appreciable vibration Yes.

Report.—Has a separate report Rpt. 4a for the Engines been issued

ENGINES.—Type of Engines Revs. per minute

Governor fitted Is the speed variation as per Rule when load is thrown off

Emergency Governor fitted Does it operate as per Rule

Testing.—Has each Engine been tested and found to be capable of developing 10 per cent. overload for one hour as per Rule

Report.—Has a separate report Rpt. 4b for the Engines been issued

GENERATORS.—Direct or Alternating Current alternating current. No. of Generators Two.

Alternating current state number of phases Three. Frequency 65-68 cycles/sec.

Watts per Generator 5000 Voltage per Generator 3150 Amperes per Generator 8/6 AT 1.0 P.F.

They comply with the requirements regarding insulation materials. Yes.

Finals Yes, coolers see attached memorandum thermometers Yes.

Location ✓, position in ship ✓, temperature rise see memorandum

Added temperature detectors Yes. shaft currents ✓

Ventilation.—State how this is arranged (open or closed system) Closed. Opened in emergency only.

Open system are ventilating arrangements satisfactory Yes.

Ventilating when Idle.—State what provision is made The shunt fields of the alternators and double wound unit

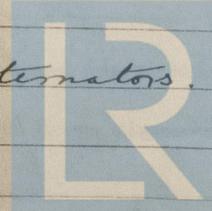

motor are provided with switching arrangements so that they may be connected in series

and current passed at standstill. Facilities for Inspection and Repair.—Are these as per Rule Yes.

Wear-down gauges supplied Wear down gauges provided for alternators.

Bilges.—Are the arrangements to prevent accumulation of bilge-water under the machines satisfactory ✓

| Do they comply with the requirements regarding insulation materials   | Yes - Class B.  | Amperes per Motor   | 916.21   |                              |                           |                 |                                |                           |                 |                        |                |                        |                        |             |       |                 |  |  |  |  |  |  |  |                  |  |  |  |  |  |  |  |             |  |  |  |  |  |  |  |              |  |  |  |  |  |  |  |                  |  |  |  |  |  |  |  |                  |  |  |  |  |  |  |  |
| terminals   | Yes., coolers see Memorandum, thermometers Yes., ventilation Open   | If a switch is used to disconnect the aural signal does it automatically switch on the visual alarm Yes.  |  |                              |                           |                 |                                |                           |                 |                        |                |                        |                        |             |       |                 |  |  |  |  |  |  |  |                  |  |  |  |  |  |  |  |             |  |  |  |  |  |  |  |              |  |  |  |  |  |  |  |                  |  |  |  |  |  |  |  |                  |  |  |  |  |  |  |  |
| heating when idle   | Yes., shaft currents Yes., facilities for inspection and repair Yes.  | Are the excitation circuits provided with means for earth detection Yes.  |  |                              |                           |                 |                                |                           |                 |                        |                |                        |                        |             |       |                 |  |  |  |  |  |  |  |                  |  |  |  |  |  |  |  |             |  |  |  |  |  |  |  |              |  |  |  |  |  |  |  |                  |  |  |  |  |  |  |  |                  |  |  |  |  |  |  |  |
| mechanical protection   | Yes., lubrication Disc and wiper, position in ship Aft.   | Mechanical Protection.—Are circuits above 250 volts to earth protected as per Rule ✓  |  |                              |                           |                 |                                |                           |                 |                        |                |                        |                        |             |       |                 |  |  |  |  |  |  |  |                  |  |  |  |  |  |  |  |             |  |  |  |  |  |  |  |              |  |  |  |  |  |  |  |                  |  |  |  |  |  |  |  |                  |  |  |  |  |  |  |  |
| A.C. Motors.—Are the laminations securely clamped around the whole of the periphery                             | Yes.  | Bridge or Deck Control.—Is bridge control provided ✓ If so, from how many stations ✓  |  |                              |                           |                 |                                |                           |                 |                        |                |                        |                        |             |       |                 |  |  |  |  |  |  |  |                  |  |  |  |  |  |  |  |             |  |  |  |  |  |  |  |              |  |  |  |  |  |  |  |                  |  |  |  |  |  |  |  |                  |  |  |  |  |  |  |  |
| and are they insulated from one another with approved material  | Yes.  | Can they be operated freely without producing currents or loads in excess of the working capacity of the plant ✓ and without reference to electrical instruments ✓ Is an emergency control provided in the engine room ✓  |  |                              |                           |                 |                                |                           |                 |                        |                |                        |                        |             |       |                 |  |  |  |  |  |  |  |                  |  |  |  |  |  |  |  |             |  |  |  |  |  |  |  |              |  |  |  |  |  |  |  |                  |  |  |  |  |  |  |  |                  |  |  |  |  |  |  |  |
| Is provision made for machining the collector rings   | split type slip rings and are readily removable   | and can the transfer to this control be made quickly in the engine room ✓   |  |                              |                           |                 |                                |                           |                 |                        |                |                        |                        |             |       |                 |  |  |  |  |  |  |  |                  |  |  |  |  |  |  |  |             |  |  |  |  |  |  |  |              |  |  |  |  |  |  |  |                  |  |  |  |  |  |  |  |                  |  |  |  |  |  |  |  |
| Do the Motors remain in step under all normal conditions of running   | ✓   | Can the emergency control be rendered mechanically independent of the bridge control ✓  |  |                              |                           |                 |                                |                           |                 |                        |                |                        |                        |             |       |                 |  |  |  |  |  |  |  |                  |  |  |  |  |  |  |  |             |  |  |  |  |  |  |  |              |  |  |  |  |  |  |  |                  |  |  |  |  |  |  |  |                  |  |  |  |  |  |  |  |
| D.C. Motors.—Are the brushes staggered as per Rule  |   | Instruments and Gauges.—State what Instruments are provided for each Generator Stability Indicator, A.C. Voltmeter with switch A.C. ammeter with switch, wattmeter, Cambridge E.T.D indicator for all machines and for air and water temperatures and for each Motor As for Generators, one complete set for port and aft half motors, and the other for and, for Steam Engines, what Gauges are provided Yes   |  |                              |                           |                 |                                |                           |                 |                        |                |                        |                        |             |       |                 |  |  |  |  |  |  |  |                  |  |  |  |  |  |  |  |             |  |  |  |  |  |  |  |              |  |  |  |  |  |  |  |                  |  |  |  |  |  |  |  |                  |  |  |  |  |  |  |  |
| If the system permits overspeeding at light loads are overspeed protection devices fitted                       |   | Is an Insulation Tester provided ✓  |  |                              |                           |                 |                                |                           |                 |                        |                |                        |                        |             |       |                 |  |  |  |  |  |  |  |                  |  |  |  |  |  |  |  |             |  |  |  |  |  |  |  |              |  |  |  |  |  |  |  |                  |  |  |  |  |  |  |  |                  |  |  |  |  |  |  |  |
| EXCITATION.—Is current for excitation taken from the ship's Auxiliary Generators                                | Yes.  | Discharge Protection.—Are all circuits protected as per Rule Yes.   |  |                              |                           |                 |                                |                           |                 |                        |                |                        |                        |             |       |                 |  |  |  |  |  |  |  |                  |  |  |  |  |  |  |  |             |  |  |  |  |  |  |  |              |  |  |  |  |  |  |  |                  |  |  |  |  |  |  |  |                  |  |  |  |  |  |  |  |
| If so state voltage   | 220 D.C.  | (1364 on double excitation)   | kilowatts for excitation 300<br>and excitation amperes at full power 682 150 |                              |                           |                 |                                |                           |                 |                        |                |                        |                        |             |       |                 |  |  |  |  |  |  |  |                  |  |  |  |  |  |  |  |             |  |  |  |  |  |  |  |              |  |  |  |  |  |  |  |                  |  |  |  |  |  |  |  |                  |  |  |  |  |  |  |  |
| State arrangements for excitation of Propulsion Generators  | each Alternator shunt field is supplied from its own motor driven excited, the motor being supplied from the ship's 220 Volt on and Propelling Motors a contactor driven by the same motor as the generator excited is in series with the ship's 220 volt supply. | D.C. Systems.—If the Generators are connected in series state what means are provided to prevent reversal of rotation ✓   |  |                              |                           |                 |                                |                           |                 |                        |                |                        |                        |             |       |                 |  |  |  |  |  |  |  |                  |  |  |  |  |  |  |  |             |  |  |  |  |  |  |  |              |  |  |  |  |  |  |  |                  |  |  |  |  |  |  |  |                  |  |  |  |  |  |  |  |

All Conductors are of annealed copper, conforming to International Electrotechnical Commission Publication No. 28.

The Insulated Conductors have withstood the dielectric tests specified in the Rules.

The foregoing is a correct description,

THE BRITISH THOMSON-HOUSTON CO., LTD.

per H.C. Manning

Electrical Engineers.

Date

5<sup>th</sup> April 1946.

~~COMPASSES.—Are Single-Conductor circuits carrying continuous current arranged with lead and return Conductors fitted as close to one another as possible~~

~~Have tests been made during adjustment of the Compasses to determine the effect of switching the main circuits on and off~~

~~The maximum deviation due to electric currents was found to be degrees on course in the case of the~~

~~Standard Compass and degrees on course in the case of the Steering Compass.~~

Total No. of visits

Is this machinery duplicate of a previous case Yes. If so, state name of vessel

"OLNA" (1689)

**General Remarks** (State quality of workmanship, opinions as to class, &c.) The Alternators, propulsion motor cubicles and control desk, excitation and control panels, lever gear also exciters have been manufactured under special survey and in accordance with the approved plans. (Temperature rises - Please see attached memorandum)

The alternators and Propulsion motor have undergone running tests on short circuit and open circuit conditions (Alternators with open type ventilation and propuls motor with fans at full speed and load), such as to indicate that the temperature rises comply with the requirements of the Rules for Electrical Propelling Machines at a Rating of 13,000 S.H.P. The exciter sets have been found satisfactory under full load working conditions and to be capable of momentary over loads and during manoeuvring. All the machines have been satisfactorily subjected to the high voltage tests required by the Rules. It was not found possible to completely erect the lever gear in conjunction with the Main cubicle, but the cam shaft was independently operated with satisfactory results.

The whole of the control gear was satisfactorily subjected to earth, and between poles and phases with the high voltage tests as required by the Rules.

The workmanship and materials used in the above components of the Electric Propelling Machinery were found to be good and sound.

The Surveyors are requested not to write on or below the space for Committee's Minutes.
