

M.S. "CABO SAN AGUSTIN".

A question was raised in October last regarding the registered dimensions and tonnages to be recorded in the Register Book.

It was then pointed out that the tonnage of the double bottom space, viz. 721.25 tons, was included in the under deck tonnage and it now appears that the same tonnage was included in the gross tonnage given.

The record of under deck tonnage was amended so as to exclude the tonnage of the double bottom, and the Builders now desire that the record of gross tonnage be similarly amended.

It is submitted this be done and the record be amended to 11868 tons.

The certificate of classification should also be amended accordingly.

7.1.32.
