BOARD REPORT on the

## "Cumbal" and "Chemin"

It is submitted copies of the four computations for the different arrangements of bulkheads be sent to the Liverpool Office for their guidance when reporting the lengths of the erections for foreboard assignment. They should be advised that there are no reliable particulars of the sheer on the superstructure deck available at this office & these should be carefully measured from the ship. The figure for the moulded displacement is being obtained from the builders. This and the sheer value, as reported by the Liverpool Office may modify the draughts indicated on the various computations & these should therefore only be considered as of comparative value.

(1) with tween deck bulkheads as at present - about  $20' - 7\frac{1}{2}"$ .
