

of "Tokushima Maru". Grk Rpt 16538

It is submitted that the Greenock Surveyors should be requested to state whether the heating surface of the main boilers as given on their report, viz. 8034 sq. feet, is correct as the surface on the plan is given as 8550 sq. ft. and the latter agrees with the horse power given on the report.

They should also state whether the tensile strength of the shell plated is 28½ tons as approved or 28 tons as given in the report.
