

s/s Marie Reppel  
Hull Rpt No. 32197

of HULL,

13th. October. 1920.

J. G. MACKILL OF,

Mr. Martin, representing the Managers, survey the machinery and boilers of the Steel Screw Steamer "MARIE REPPEL" 4549 tons (gross-register while the vessel was lying in the King George Dock, Hull, on the 19th. July 1920, and subsequent dates.

MARK OF GERMAN CERTIFICATE:-

MAI 1920.

The following parts were examined:-

Cylinders, pistons, slides, crank, thrust, tunnel and tail shafting, pumps, condenser, auxiliaries, bilge pipes, boxes, and connections, sea-cocks and valves, propeller fastenings and openings, steering engine and windlass. Main boilers, their safety valves and mountings.

REPAIRS:-

Six main bearing keeps machined on both sides and refitted in top brasses, six main bearing bolts screwed further up; one eye bolt made for lifting cylinder covers, twelve collar studs made for

junk ring spare gear. White metal of all top main bearings  
 cleaned up and oilways recut. H.P. crank pin brasses  
 remetalled. New eccentric troughs fitted. All column and  
 bedplate holding down bolts overhauled and tightened.  
 New dynamo supplied and fitted. Top and bottom valves fitted  
 on boilers for water pillar gauges. Six longitudinal stay nuts at  
 bottom of boilers removed. Stays caulked and nuts rejoined.  
 Boiler fenders refitted. Main steam pipes taken off, tested to  
 540 lbs. hydraulic pressure and found tight and satisfactory.

Judging from my inspection of the machinery and boilers now  
 examined, I am of opinion that they are in a good and fit condition  
 and I have recommended to the Committee of Lloyd's Register that  
 the vessel have the notation of L.M.C.10.20.

The safety valves are yet to adjust, and the trial of the engines  
 under full working conditions is still to be held. It has been  
 arranged with the Owner's Representative that the above will be  
 held before the vessel proceeds to sea; She is at present laid  
 up.

*J. G. MacKieop*
