

denfels

31st March 1920

F. STEPHENS,

Ministry of Shipping survey the machinery of the ex-German  
"GOLDENFELS", 7458 tons gross, while lying afloat in  
Docks on the 26th and 30th March 1920, for the purpose  
ascertaining as far as practicable the condition of the  
machinery.

This survey has been held in conjunction with the  
owners' representative.

A general examination has now been made as follows:-  
cylinders and pistons, valves and valve faces opened out  
examined, also the crank, thrust and tunnel shafting, air  
pump and circulating pump.

This vessel is proceeding to Swansea where it is stated  
remaining part of the conditional survey will be completed.

Judging from the inspection of the parts of the machinery  
opened up and examined, I am of the opinion the vessel is  
in a fit condition to run for a period of six months, subject  
the survey being completed, as stated above.

Surveyor to Lloyd's Register of Shipping.
