

of "Sarus."

This vessel was classed subject to the steam pipes to the windlass being fitted with an iron casing & a certificate was issued endorsed to that effect.

The Builders have returned the certificate with an objection to the endorsement.

The Surveyor who made the recommendation has been further communicated with on the subject & confirms his recommendation & has sent a sketch showing the arrangement.

It is submitted that the Builders should be advised that the wood casing as fitted is not considered as being permanently efficient & informed that as soon as a strong iron casing has been fitted & satisfactorily reported upon the complete certificate can be issued.
