r/s/s "Kamoi."

Phl. Rpt. 4445

It is Submitted the New York Surveyors be informed that from their report No. 21684 it was concluded that the two auxiliary generators could be used for propulsive purposes. But from their letter it now appears that only one auxiliary generator can be used for propulsion. & that the description should be one main & one auxiliary <sup>steam</sup> turbines connected to two electric motors & screw shafts. & this will be amended in the Register Book.

With regard to the suggested alteration of the description of the machinery for the Register Book. this matter was fully gone into at the time & it was found that a fuller description could not be made in the small available space allotted to the vessel in the Register Book.

A fresh certificate to be sent N.Y.K.
