

Steel Screw Steamer "DUINO" built by the Stabilimento Tecnico Triestino in 1923-6 mo., and classed 100A1 "Shade ~~Shelter~~ deck with freeboard", "Service in the Adriatic".

Dimensions: 226.08 x 34.44 x 15.75

This vessel has a complete superstructure above the depth given, with a tonnage opening in the sides in way of the forward hatch.

An enquiry has now been received from the Owners, who are also the Builders, asking whether in case this vessel were employed for passages from ports in the U.K. to ports in the Baltic the class could be retained.

A comparison of the scantlings as fitted has been made with the Rule requirements for a vessel of this size, and it is found that with the exception of the framing, and with a limiting draught corresponding to the freeboard previously assigned, the vessel could be recommended to the Committee for the class 100A1 "With freeboard".

In regard to the framing it would be necessary, where there is no lower deck fitted in the vessel, for web frames 24" in depth with a face bar to same 5 x 3 x 8/20" to be fitted on frames Nos. 37 and 15 aft and 21 and 37 forward.

It is submitted the Trieste Surveyors be informed accordingly by wire.
