

m.v. "BEECEELITE".

Manseau Shipyards No.56.

Plan of Pumping Arrangement in Machinery Space.  
-----

IT IS SUBMITTED the New York Surveyors be informed in reply to their letter of the 12th instant that the above plan has been considered in conjunction with their remarks.

The Surveyors conclusions regarding the sizes of the bilge suction in the machinery space are concurred in, and it is also thought that as the vessel has a beam of only 27', some concession might be made in the number of bilge suction.

A sketch is attached showing a suggested arrangement which, if adopted, will be equivalent to the requirements of the Rules, and will entail a minimum of alteration to the existing arrangement.

RETAIN PLAN  
FORWARD SKETCH.
