

S.S. "VENICE MARU", Kawasaki Dockyard Co's No. 477.

---

Electrically welded seams and butts of inner bottom plating in way of deep tank.

---

There has been no general approval of the above, but each case has been approved separately on its merits.

There is no trace in this Office of the arrangement being approved in the above vessel, and it would appear to have been arranged by Mr. H.J. Cox, at Kobe.
