

S.S. "PORTO GRANDE"

S.S. "SAGRES".

The above vessels were originally built for the carriage of water in bulk in a similar manner to the "Dr. GONDIM" which has recently been completed by Messrs. G. Brown & Co., Greenock and classed 100A1 "Carrying water in bulk".

It is submitted the Owners of both vessels be asked to state if these vessels are still engaged in carrying water in bulk, as if such is the case it is considered there should be some notation made in the Register Book which would indicate the special service for which they are suitable, in which case the class would be amended to 100A1 "Carrying water in bulk".
