

s.s. "AMERICAN FISHER".

Arrangement of Safety Valves on Steam Pipe Line  
connecting Water Tube and Scotch Boilers.  
-----

IT IS SUBMITTED the New York Surveyors be informed it is noted that the four safety valves on the emergency pipe line connecting the high pressure water tube boiler to the main steam line supplying steam to the main engines at 190 lbs/ins<sup>2</sup>, are of a special type having a stated relieving capacity of 45,760 lbs of steam per hour.

In the circumstances, these safety valves could be accepted provided the accumulation tests as specified in Section 34, Clause 3 of the Rules for Engines and Boilers be carried out to the Surveyor's satisfaction.
