GENOA

ALEXANDER LAWRENCE

Messrs N.ODERO FU ALESSANDRO & Co. inspect at the works of Messrs Vickers-Terni at Spezia, on 18th October 1924 and subsequently, 10 bronze propeller blades, (5 right hand and 5 left hand) intended for the meter tanker "METEOR", under construction in Messrs Oder's yard at Sestri Ponente (Hull N°321).

Test pieces cast with the blades and marked by me before being detached, were afterwards broken in my presence and gave results as shown on the attached sheet.

The blades themselves were carefully inspected when finished and ready for shipment, and were found so far as could be seen, sound and free from defects.

These blades are in my opinion suitable for use in a vessel classed with Lloyds Register.

For identification each blade has been marked on its face (beside the charge mark) and on the upper surface of its flange with my private stamp thus:- *al*
