

"J A C O"

This vessel is a converted L.C.T.8 and has been recommended for the class \dagger A1 with freeboard "For Coasting Service Oslofjord, Kattegat & Baltic also Hamburg via Kiel Canal."

Permission is now requested to make one voyage from Oslo to Stavanger and back at the end of May or beginning of June.

The vessel has a light wooden superstructure extending over about half of the length amidships and used for housing cattle. On account of this superstructure the vessel was not considered suitable to operate on North Sea Coasts, particularly in winter months (see endorsement dated 11-8-47).

As, however, the proposed voyage is of limited extent and in the summer season, it is considered that no exception need be taken to the proposal in this instance, and it is submitted that the Surveyors be instructed by cable to issue the necessary temporary certificate.
