

"LAZAR KAGONOVITCH"

Lon.119224

Before this case can be endorsed, the London Surveyors  
ould be asked to submit for approval a plan of the bilge and  
blast pumping arrangements. *Dealt with in endorsement dated*

*21-1-50.*

It is noted that the electrical fittings in the coal  
unkers are described as "Watertight Wellglass fittings  
with guards". It is concluded that these fittings are such  
as could be accepted as equivalent to the flame proof type  
required by the Rules, but this should be confirmed.

It is further noted that the size of LP cylinder  
approved in the endorsement dated 27. 6. 47 is for  $64\frac{3}{16}$ "  
(equivalent to 1630 mm.) while the diameter given in the  
Report 4 is for 1680 mm. The Surveyor should state which  
is accurate.

*Satisfactory mfr.  
Lon. 2-2-50.*

*J.S.  
21. 12. 49.*
