NEWCASTLE

18th November, 1954.

Messrs. Chr. Salvesen & Co.,  
29 Bernard Street,  
Leith,  
Edinburgh, 6.

Dear Sirs,

"SOUTHERN HARVESTER" and "SOUTHERN VENTURER"  
Hangar Electrical Installation.  
Portable Electrical Equipment.

---

With reference to the above installations recently fitted at this port, and to the portable electric equipment and flameproof type switch sockets in the hangar, we have been advised by our London Office that, in these particular cases, no exception will be taken to the portable pump motor concerned being supplied at 230 volts single-phase A.C. from the flameproof socket provided, subject to effective arrangements being made for earthing the motor frame via an earth continuity conductor in the flexible cable and a non-flameproof motor of the squirrel cage type could be accepted, provided it does not incorporate cut out devices in association with its starting arrangements.

The starting switch will require to be flameproof.

Yours faithfully,  
THE SURVEYORS.
