

T.S. STEAMER "BULLAREN"

Built at Gothenburg.

The anchors and chains of this vessel were reported to have been tested at Dusseldorf, but no names of ~~the~~ works were given where the test was carried out.

The Gothenburg Surveyors have been communicated with, and they state that they have written to Mr. Hauss at Dusseldorf, but the letter has been returned, and no information can be furnished.

It is submitted that, in the circumstances, and as the anchors and cables have been tested and certificates issued, it is considered that the equipment might be accepted for the Figure 1.
