

S.S. "MONTCALM".

-----

Plan of new rudder submitted by Messrs. Harland &  
Wolff Ltd., Liverpool.

-----

It is submitted that provided the arrangements be  
carried out as shown and amended, and to the satisfaction of  
the Surveyors, they will merit approval.

The Builders should further be informed that the  
rectangular coupling is preferred to the alternative coupling  
of circular form, for in the latter case the distance between  
the bolts is such that it is considered probable the faces of  
the coupling will not be brought close together and corrosion  
will result. If, however, the Owners desire to adopt the  
alternative coupling this could be approved, provided  
the arrangements be modified on the lines indicated on the plan.
