

REPORT on the Tanker "Edwin B. de Golia"

It is submitted the New York Office be informed that much of the information indicated on their published report for the above tanker differs from that indicated on the 116 report made when the vessel was built.

The moulded depth was reported as 28'-0", whereas it was reported as 28'-1½" originally with a full in sheer of 1½". The sheer heights plotted from those reported originally are different, and the height of poop reported originally is 9'-10" greater than that now reported.

A ^{corrected} computation based on the figures reported when the vessel was built should be forwarded for the New York Office's information.

The records in the Register Book should not be amended in the meantime.
