General Remarks (State quality of workmanship, opinions as to class, &c.)

Spare screw shaft lost

Material of screw shaft *lost* Is the screw shaft fitted with a continuous liner the whole length of the stern tube *yes*

Is the after end of the liner made water tight in the propeller boss *yes* If the liner is in more than one length are the joints burned ✓

If the liner does not fit tightly at the part between the bearings in the stern tube, is the space charged with a plastic material insoluble in water and non-corrosive ✓ If two liners are fitted, is the shaft lapped or protected between the liners ✓

The machinery of this vessel constructed under special survey, the material and workmanship good and efficient— Boilers and main steam pipes tested under hydraulic pressure 360 lbs and found efficient in every respect at that pressure—

The Engines tried under steam at their working pressures and found satisfactory—

*In my opinion this vessel is worthy of the notation *+LMC 5.01* to be made in the Register Book.*

It is submitted that this vessel is eligible for THE RECORD. *+LMC 5.01*
