TRIESTE

13241 "MELTEN" This vessel has today been classed A1 "With freeboard" "for service in <sup>the</sup> Bosphorus" "Carrying petroleum in bulk", with notation of LMC 3,49, the Machinery Certificate to be endorsed "Torsional vibration characteristics not investigated". This matter has been referred to the Anglo Saxon Petroleum Co. in this city, who have agreed to this procedure.

They also state that the account for the fess in this case has been forwarded to their accounts department for settlement.

It is noted there are no electrical fittings placed near to spaces containing explosive gases. It is therefore concluded that the pump room lighting complies with section 15 of the Rules for Electrical Equipment, but I shall be glad if you will forward a brief description for record purposes.
