Lloyd's Register of Shipping,
Hull.

19th February, 1946.

Dear Sir,

In reply to your letter of the 18th instant, regarding the trawlers "ABY", "BULBY" and "NAVENA", Messrs. Cook, Welton & Gemmell's Yard Nos. 755, 6 and 7, we beg to acquaint you that repeated efforts have been made to obtain diagrammatic drawings of the electrical installation from the Electrical Engineers concerned, but they state that owing to shortage of staff and extreme pressure of work they have been unable to comply with our requests.

I have spoken today with them, and they have promised that the drawings will be submitted this week without fail and further that such diagrammatic drawings for future vessels will be submitted at once.

Yours faithfully,

signed:- Geo.A. Laing.

For Engineer Surveyors (F.E. Rpts.) to note.

COBA with one longitude.

Small and extreme fragments of rock were seen north to
south and east, but they were not found to be of any
importance of the geological investigation from the geological
point of view. The rocks were seen to be of a granitic
nature, and were not of any importance.
