

"KAHANUI".

Salvage Tug built by
Messrs. The Dublin Dockyard Co
for the
Wanganui Harbour Board.

(Glasgow Report No.46077).

The Builders, Messrs. The Dublin Dockyard Co.,
the capacity of
point out that the electric lighting generating set of
this vessel is only 8 kilowatts and it would appear
that the Glasgow Office had included in the fees the
electric generating set supplied by Messrs. Merryweather,
which they point out has nothing to do with the electric
lighting installation on board the ship; further, that
the latter set was separately surveyed to meet the Owners
requirements alone.

(Note:- It was arranged that the Society's Surveyors
should supervise the carrying out of the specification for
a special additional fee of £77.10.0, this being equivalent
to the amount of the fees for Special Survey during construction)

IT IS SUBMITTED the Glasgow Office be advised as it
appears that the capacity of the electric lighting set of the
vessel is only 8 kilowatts and that the additional 15 kilo-
watt electric generator has nothing to do with the lighting
installation, therefore a fee of £8 plus 10s.6d. should be
charged and an amended account be rendered to the Builders.
