

14 SEP 1934

29th August 1934

Dear Sir,

T.S.S. "CAMPALANS"

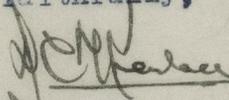

We are recommending that the machinery of the above vessel be classed, with notation +LMC 8,34 "subject to suitable terminal cocks being fitted to the water gauge columns".

We understand that the vessel is now leaving Vigo for Barcelona where the above requirement will be carried out.

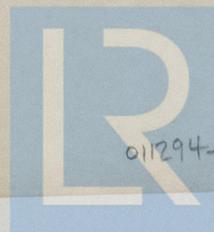

We may add that as some priming occurred on trials, the Builders fitted extra water gauges to the boilers, but not having suitable terminal cocks for bolting to the shell as required by Rules, screwed valves were fitted as a provisional measure and now require to be replaced.

We are, Dear Sir,

Yours faithfully,

  
For the Surveyors

The Surveyor  
Barcelona
