

Hydrofoil supported T.S. Motor Launch "WATERMAN".

The above launch is fitted with two 70 B.H.P. outboard Kiekaefer petrol motors and difficulty is being experienced in obtaining sufficient information to enable this machinery installation to be fully considered for classification.

In view, however, of the fact that only small outboard engines are involved and in order to avoid further delay in the consideration of the hull First Entry Report on the launch, it is considered the vessel could be classed independent of the machinery provided the Rotterdam Surveyors confirm that the fitting of these motors, the petrol tanks and their connections, electrical equipment and sea connections (if any) are to their satisfaction and the bilge pumping arrangements are tested under working conditions.
