

24th July, 1959

STOCKHOLM.

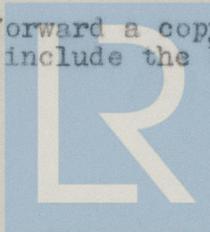

12104 - As recommended.

12047 "ALDAN" - This vessel has today been classed #100A1 "Tug" together with the appropriate notations recommended by you.

I shall be glad if you will confirm that the moulded length is 235' 7" and not as reported, <sup>and</sup> in this connection I would refer you to the key to the Register Book. Confirmation is also desired that the chain cable is of special quality steel and not mild steel as reported.

I would point out that in future similar cases, the section of the report under the heading "Capacities of Tanks" must be completed.

I shall be glad if you will forward a copy of the Machinery Interim Certificate which should include the barred speed range.
