

COPY.

3rd February, 1939.

MONTREAL.

4792, As recommended.

4830 "PETROLITE" This vessel has today been classed:- @ 100 Al  
Car. Pet. in bulk, with notations of Lloyd's A & CP, @ LMC 11,38,  
Oil Eng, C.L. I think it well to refer you to page 32 of the Rules  
regarding the computation of the scantling numerals which are given  
incorrectly in your report.

It is concluded that a spare power driven lubricating oil pump is  
fitted and that one of the auxiliary engines can be started by hand  
for first charging up the air receivers but perhaps you will kindly  
confirm this. It is also concluded that the donkey boiler cannot be  
used for heating the fuel oil or for any other auxiliary purpose but  
confirmation on this point is desired.
