

"SHELL 15"

012089-012095-0311

This unclassified Motor Tanker was built in 1924.

Part of a Special Survey for Classification has been carried out at LISBON (9.47), including the drilling of the shell plating.

On account of the large number of shell plates which are worn below renewal thickness, and in accordance with the Lisbon Surveyors' letter of the 5th Sept., the Society's recommendations for the renewal of these plates were discussed with the Owners' Representative, Mr. Benkhuyzen.

Mr. Benkhuyzen expressed a wish for a copy, in duplicate, of the shell expansion, indicating the plates recommended for renewal, for transmission to their representative in Lisbon, so that the necessary steps could be taken for classification.

It is submitted two photostat copies of the shell expansion indicating the plates recommended for renewal be forwarded to the Owners' Representative as requested: the LISBON Surveyors should be informed accordingly.

*Delay was caused in this case due to failure
of the A.S.P.C. representatives to fulfil the appointment
two holidays etc.*
