25th May, 1967.

Dear Sir,

"ST. AGNES".

We have been informed by our London office that the Continuous Survey of Machinery cycle of the above-named tug has not been kept up to the agreed 20% per annum. Apart from the main condenser nothing has been seen since the completion of the Special Survey in March, 1966.

We shall be grateful if you will inform us when the survey cycle will be advanced in order to transmit the information to our London Office.

We would also like to draw your attention to the C.S.M. cycle of the tug "St. Levan" which is a similar case.

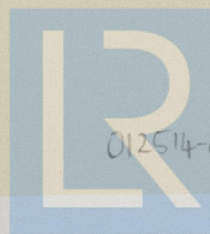

The examination of the machinery spare gear for the tug "St. Mawes" is also overdue and we would appreciate advice as to when this examination can be carried out.

Yours faithfully,
The Surveyors,
