

Rpt. 4b

Date of writing report 24.8.1960 Received London Port Winterthur No. 515
 Survey held at Winterthur No. of visits 14 22.12.1959 10.8.1960
 On vessel First date Last date

FIRST ENTRY REPORT ON INTERNAL COMBUSTION MACHINERY

No. in R.B. Name Gross tons
 Owners Messrs. Astilleros Argentinos
 Rio de la Plata Managers
 Hull built at By Port of Registry 106 Year Month
 Main Engines made at Winterthur By Messrs. Sulzer Bros. Ltd. Eng. No. 49901/49907 When 1959-60
 Gearing made at By
 Donkey boilers made at By Blr. Nos. When
 Machinery installed at By When
 Particulars of restricted service of ship, if limited for classification
 Particulars of vegetable or similar cargo oil notation, if required
 Is ship to be classed for navigation in ice? Is ship intended to carry petroleum in bulk?
 Is refrigerating machinery fitted? If so, is it for cargo purposes? Type of refrigerant
 Is the refrigerating machinery compartment isolated from the propelling machinery space? Is the refrigerated cargo installation intended to be classed?

The following particulars should be given as fully and as clearly as possible. Where the answer is "No" or "None", say so! Ticks and other signs of doubtful meaning are not to be used. Where the wording is not applicable to the installation, a black line may be inserted. If the main engines have been constructed at another port and are covered by a separate report, the particulars given in that report need not be repeated below, but the port and report number should be stated.

No. of main engines two No. of propellers two Brief description of propulsion system Diesel Engines with direct shaft drives to propellers

MAIN RECIPROCATING ENGINES. Licence Name and Type No. Sulzer solid injection, type 6TD29
 No. of cylinders per engine 6 Dia. of cylinders 290 mm stroke(s) 500 mm 2 or 4 stroke cycle 2 Single or double acting single
 Maximum approved BHP per engine 720 at 360 RPM of engine and 360 RPM of propeller.
 Corresponding MIP 78 lbs/ins² (For DA engines give MIP top & bottom) Maximum cylinder pressure 850 lbs/ins² Machinery numeral 360 288
 Are the cylinders arranged in Vee or other special formation? no If so, number of crankshafts per engine

TWO STROKE ENGINES. Is the engine of opposed piston type? no If so, how are upper pistons connected to crankshaft?
 Is the exhaust discharged through ports in the cylinders or through valve(s) in the cylinder covers? ports No. and type of mechanically driven scavenge pumps or blowers per engine and how driven 6 double acting - driven by main engine levers
 No. of exhaust gas driven scavenge blowers per engine none Where exhaust gas driven blowers only are fitted, can the engine operate with one blower out of action?
 If a stand-by or emergency pump or blower is fitted, state how driven No. of scavenge air coolers Scavenge air pressure at full power 0.191 kg/cm² Are scavenge manifold explosion relief valves fitted? yes

FOUR STROKE ENGINES. Is the engine supercharged? Are the undersides of the pistons arranged as supercharge pumps? No. of exhaust gas driven blowers per engine
 No. of supercharge air coolers per engine Supercharge air pressure Can engine operate without supercharger?
 TWO & FOUR STROKE ENGINES—GENERAL. No. of valves per cylinder: Fuel one Inlet none Exhaust none Starting one Safety one

Material of cylinder covers cast iron Material of piston crowns cast iron Is the engine equipped to operate on heavy fuel oil? no
 Cooling medium for :—Cylinders water Pistons oil Fuel valves oil Overall diameter of piston rod for double acting engines
 Is the rod fitted with a sleeve? Is welded construction employed for: Bedplate? no Frames? no Entablature? no Is the crankcase separated from the underside of pistons? no Is the engine of crosshead or trunk piston type? piston Total internal volume of crankcase 2.64 m³ No. and total area of explosion relief devices 6 - 480 cm² Are flame guards or traps fitted to relief devices? yes Is the crankcase readily accessible? yes If not, must the engine be removed for overhaul of bearings, etc? no Is the engine secured directly to the tank top or to a built-up seating? How is the engine started? compressed air
 Can the engine be directly reversed? yes If not, how is reversing obtained?

Has the engine been tested working in the shop? yes How long at full power? 3 hours
 CRANK & FLYWHEEL SHAFTING. Date of approval of torsional vibration characteristics of the propelling machinery system 8.1.60 17.11.59 State barred speed range(s), if imposed

for working propeller 158-178 For spare propeller Is a governor fitted? yes Is a torsional vibration damper or detuner fitted to the shafting? no
 Where positioned? Type No. of main bearings 7 Are main bearings of ball or roller type? no Distance between inner edges of bearings in way of crank(s) 349 mm Distance between centre lines of side cranks or eccentrics of opposed piston engines

Crankshaft type: Built, semi-built, solid. (State which) solid forged
 Diameter of journals 190 mm Diameter of crankpins Centre 190 mm Breadth of webs at mid-throw 310 mm Axial thickness of webs 95 mm
 Side Pins SM Steel Minimum 28/32 tons/ins²
 If strunk, radial thickness around eyeholes Are dowel pins fitted? Crankshaft material Journals Approved Tensile strength
 Webs Tensile strength
 Diameter of flywheel 1040 mm Weight 1355 kg Are balance weights fitted? no Total weight 1355 kg Radius of gyration 0.430 m
 Diameter of flywheel shaft 19/170 mm Material S.M. Steel Minimum approved tensile strength 32 tons/ins²
 Flywheel shaft: separate, integral with crankshaft, integral with thrustshaft. (State which) Integral with thrust shaft

GENERAL REMARKS

State if the machinery has been constructed and/or installed under special survey in accordance with the Rules, approved plans and Secretary's letters. State quality of materials and workmanship and give recommendations for classification, including any special notation to be assigned. Where existing machinery is submitted for classification the circumstances should be explained as fully as possible.

These Main Engines have been built under Special Survey in accordance with the Secretary's letters, the requirements of the Rules and the approved plans.

The materials and workmanship are good.

The torsional vibration characteristics of the shafting installation of the main machinery have been approved for a service speed of 360 R.P.M. provided a notice board be fitted at the control station stating that the engine is not to be operated continuously between 158 and 178 R.P.M. and the engine tachometer be marked accordingly.
